Abstract (en)

The present disclosure provides a method and apparatus for controlling the reset of a moveable component, and a storage medium. The method includes: receiving a reset signal, herein the reset signal is configured to instruct the moveable component to move to a reset position; controlling the movable component to move a first preset distance along a first moving direction; controlling the moveable component to move a second preset distance along a second moving direction, herein the first moving direction is opposite to the second moving direction; and controlling the moveable component to move to the reset position.
