Abstract (en)

This application discloses an alarm log compression method, apparatus, and system, and a storage medium, and belongs to the field of communications technologies. The method includes: obtaining a historical alarm log set generated by a first network device in a communications network; dividing the historical alarm log set into a plurality of historical alarm log subsets based on a generation time stamp of a historical alarm log in the historical alarm log set, where all historical alarm logs in each historical alarm log subset are consecutive in a time sequence; determining a correspondence between an alarm type in the historical alarm log set and the plurality of historical alarm log subsets; performing clustering processing on the alarm types in the historical alarm log set based on the correspondence, to generate at least one association rule; and compressing a plurality of to-be-processed alarm logs based on the at least one association rule, to obtain an alarm log whose alarm type is a root cause alarm type. This application resolves a problem that an association rule mining efficiency is relatively low and time costs are relatively high.
