Abstract (en)
[origin: WO2019201929A1] The invention relates to a cosmetic product application device (10) comprising a first part (12) and a second part (14), the first part (12) being able to be fastened to the second part (14) on a first end, and a dressing able to be displaced between an engaged position, in which the dressing covers at least partially the first part (12), and a free position. The displacement between the engaged position and the free position is carried out by translation of the dressing from the second end of the first part (12). The dressing comprises a thrusting member movably mounted between an idle position and an extraction position, the thrusting member being able to disengage the first indexing element from the first part (12) and a second indexing element from the dressing in the extraction position.
