Abstract (en)

[origin: WO2019201691A1] The invention relates to a closing device for a beverage container, comprising a closing body (14) and a closing lid (15), said closing lid (15) being mounted such that it can rotate, relative to the closing body (14), between a flow state and a sealed state. A liquid channel (16) of the closing body (14) is released in the flow state and blocked in the sealed state. A guide device (17, 18, 19, 20, 21, 35) is arranged between the closing lid (15) and the closing body (14). The guide device has two preferred positions (21, 35), which define the sealed state and the flow state. The rotatable mount between the closing lid (15) and the closing body (14) is in the form of a threaded mount (30, 31).
