Abstract (en)
[origin: WO2019203664A1] In one embodiment, a medical circuit component for use with humidified gases is described. The medical circuit conduit includes: a body comprising a wall having an inner surface that defines a space within which humidified gases may flow and/or be contained; and moisture transport means and/or element(s) at least partially coupled to and/or at least partially integrated into at least a part of the wall, the moisture transport means and/or element(s) being configured to receive moisture from vapors and/or liquid inside the space and transport at least some of said moisture away from where it was received.
