Abstract (en)

[origin: WO2019201554A1] The invention relates to a method for the communication of a motor vehicle (K1) with a traffic participant. The communication is carried out such that the traffic participant is informed on a planned maneuver of the motor vehicle (K1) or an eminent door opening of the motor vehicle (K1) and/or on whether the motor vehicle (K1) has detected the other traffic participant. In the method, at least one optically visible appearance is generated on a surface (F) which can be traversed and/or on the motor vehicle (K1). According to the invention, the optically visible appearance is carried out by the motor vehicle (K1) at least on a sub-region of a window pane (20, 21, 22) facing the traffic participant.
