Abstract (en)

[origin: WO2019201765A1] The invention relates to qualitative or quantitative determination of chemical compounds or classes of compounds in heterogeneous waste comprising biodegradable and non- biodegradable matter. The method may especially be used for identifying, tracking and mapping geographical origin of waste, such as e.g. municipal solid waste, agricultural waste or industry waste comprising one or more specified chemical compounds and for identifying, tracking and mapping any change in occurrence of one or more specified chemical compound(s) present in the waste from a certain geographic area. The current invention is well-suited for analyzing and/or monitoring waste being subjected to waste treatment in a large-scale waste plant.
