Abstract (en)
[origin: WO2019203712A1] The disclosure relates to the present disclosure relates to techniques in the context of Vehicles-to- Everything, V2X, communication, and in particular to methods for diagnosing wireless transmission functionality of a vehicle supporting V2X. According to a first aspect, the disclosure relates to method for use in a first vehicle, for assisting a control arrangement in diagnosing a short-range wireless transmission functionality of a second vehicle. The method comprises measuring a distance between the first vehicle and the second vehicle and estimating a received signal quality of a short-range wireless signal transmitted by the second vehicle. The method further comprises transmitting a message indicative of the measured distance and the estimated received signal quality to the control arrangement. The disclosure also related to a corresponding method for diagnosing the short-range wireless transmission functionality and to a control unit, control arrangement and to a computer programs for performing the proposed methods.
