Abstract (en)
The invention relates to a drainage pump assembly (1) for pumping liquid comprising solid matter, comprising a drainage pump (2), wherein the drainage pump (2) comprises a drive unit having an electrical motor and a drive shaft, a hydraulic unit having an impeller connected to the drive shaft and arranged in a volute, an inlet opening located upstream the volute and an outlet opening located downstream the volute, and a rigid inlet strainer (13) located upstream the inlet opening and having a plurality of through holes (14) through which the pumped liquid will flow to reach the inlet opening. The drainage pump assembly (1) comprises a bristle trap (16), wherein the bristle trap (16) comprises a body (17) connected to the drainage pump (2) and comprises bristles (18) connected to and extending from said body (17), wherein the bristles (18) are arranged adjacent the inlet strainer (13) and the through holes (14) of the inlet strainer (13) are overlapped by said bristles (18).
