Abstract (en)
[origin: EP3783258A1] Provided is a vehicular lamp fitting (10) that can prevent a stepped portion from being formed between an outer lens and a housing, comprising: an outer lens (20) including a first closed end portion (21), a first open end portion (22) opposite to the first closed end portion, and an inner member containing portion between the first closed end portion and the first open end portion; a housing (30) including a second closed end (31) portion and a second open end portion (31) opposite to the second closed end portion; an inner member (70) that forms a seal groove between the inner member and an inner surface of the first open end portion in a state in which the inner member is contained in the inner member containing portion; and an adhesive (65) applied to the seal groove, wherein an open end surface of the housing is provided with a protruding portion inserted in the seal groove to which the adhesive is applied.
