Abstract (en)

A refrigerant system (1) is described comprising a refrigerant circuit having a first heat exchanger (2), a compressor (3), a second heat exchanger (4) and a separator (5) connected to a refrigerant outlet of the first heat exchanger. It should be possible to remove liquid from a refrigerant flow even with a limited size of the separator. To this end, the separator (5) comprises at least two flow paths arranged in parallel between an inlet (12) and an outlet (13).
