Abstract (en)
[origin: WO2019206366A1] A measuring instrument (1) for gauging and inserting a retaining ring (20), comprising a push tube (2) having a flange region (4), a conical region (8) and a middle region (7), wherein the middle region (7) connects the flange region (4) to the conical region (8), wherein a segmented thrust collar (10) having an internal circumferential surface (12) corresponding to the conical region (8) of the push tubes (2) is arranged on the outer circumference (9) of the conical region (8) of the push tube (2) and wherein the segmented thrust collar (10) is in active contact with the flange region (4) of the push tube (2) by way of a spring arrangement arranged on the outer circumference of the middle region (7) of the push tube (2), and wherein the outer circumference surface (24) of the segmented thrust collar (10) acts as a gauge and as a press-fit part.
