Abstract (en)
[origin: WO2020020500A1] The invention relates to a motor vehicle handle (3), having a handle body (4) with a first longitudinal end (8), a second longitudinal end (9), and a receiving area (10) which is formed on the handle body (4) between the first longitudinal end (8) and the second longitudinal end (9); an electronic module (5) which is arranged within the receiving area (10); and at least one cable (6) which is used to transmit information and/or energy and which connects a connection plug (7) to the electronic module (5). A free end (12) of a bearing arm (11) which can be pivotally mounted on a motor vehicle (1) protrudes from the first longitudinal end (8), and the connection plug (7) is arranged on the free end (12). A strain-relief cable guide element (14) which is designed to guide the at least one cable (6) is releasably attached to the handle body (4) and extends between the electronic module (5) and the connection plug (7).
