Abstract (en)

[origin: WO2019207224A1] The invention relates to a height-adjusting device comprising a recess made in the loading platform (2) in the region of the site intended for a wheel (4) of the road vehicle (3), the size of the recess being such that the wheel (4) can be at least partially engaged through the recess. It also comprises a supporting device for a wheel, said supporting device being mounted on the loading platform (2) in the region of the site intended for the wheel (4), said supporting device comprising at least one mobile and/or deformable supporting part (10) for holding the wheel (4) on at least one contact zone such that the wheel (4) is carried by said contact zone, the movement or the deformation of the at least one supporting part (10) vertically moving the position of the contact zone.
