Abstract (en)

[origin: WO2019207220A1] The invention relates to a control (1) for opening an openable body section of a motor vehicle comprising electrical and mechanical means making it possible to unlock a lock in order to allow the opening of said openable body section, the control (1) comprising an electrical rocker switch presented in the form of a button (3) pivotably mounted about a first axis of rotation (5) and supported by a base (7), the opening control (1) being characterised in that said base (7) of the switch is configured to be pivotably mounted about a second axis (23) of rotation and is intended for engaging with an element (25) for mechanically actuating the lock so that the pivoting of said base (7) about the second axis (23) of rotation mechanically actuates the unlocking of said lock.
