Abstract (en)

[origin: WO2019207250A1] The present invention relates to a protector screen for use against arthropods, comprising a sheet (11) having a core made from glass or a plastic material, which is at least partially transparent, and comprising a plurality of ventilation holes (12), each of said ventilation holes being designed to prevent arthropods from passing therethrough. At least a portion of each ventilation hole is closed by a lateral wall or by contiguous lateral walls forming a single piece that is open at the ends thereof. The ventilation holes (12) are designed such that a gaseous fluid, such as air, can pass through the screen (10), while optimising light transmission and optionally cooling the fluid passing through the screen.
