Abstract (en)

[origin: WO2019206768A1] Plug-in radio module for automation engineering for wireless data transmission, having at least a wired interface (7) for connecting to a corresponding wired field device interface (5) of a field device (1) and radio module electronics (8) having a radio antenna (9), wherein the radio module electronics (8) are configured to use the wired interfaces (5, 7) to query at least one current value (l) of the field device (1) and to use the current value (l) to adapt a paging interval (3a) and/or a radio data width (3b) for the wireless data transmission as appropriate, so that the radio module electronics (8) perform an adapted-power mode of operation in which the wireless data transmission is matched to the power (P) currently made available to the field device (1).
