Abstract (en)
[origin: WO2019206656A1] The invention relates to a method for an automated assembly or plug-in process of at least one first contact element (11), which is connected to a first wire (12), and a second contact element (21), which is connected to a second wire (22), into adjacently arranged contact chambers (31, 32) through a respective assembly opening (33, 34) of a contact support (30), wherein a gripping device grips the first and second wire (12, 22) such that one of the two contact elements (11, 21) protrudes in the plug-in direction (S) and thereby moves forward relative to the other contact element (21, 11) during the assembly process.
