Abstract (en)

[origin: WO2019206910A1] In order to render possible reliable charging of the intermediate circuit capacitors of an inverter (1) which comprises an intermediate circuit (3), a DC/AC voltage bridge (3) and a control unit (5), according to the invention an intermediate circuit voltage (Uz) of the intermediate circuit (3) is precharged in a precharging mode via a capacitive circuit (C), preferably a capacitive voltage divider, by means of a power supply system (4) which is connected to the output.
