Abstract (en)
[origin: WO2016193382A1] The invention relates to a water sports device comprising an inflatable body component (1) having a longitudinal direction (L) and inflatable arms (8a, 8b) on a rear end, the arms being distanced from one another and orientated in the longitudinal direction (L), between which arms a receptacle (2) having an inner contour is formed, and comprising a drive component (7) having a tread surface (4) and an underwater surface (3), which drive component is formed with a complimentary contour (10a, 10b, 11) on two longitudinal sides (10a, 10b) that are distanced from one another and which component can be inserted into the receptacle (2) from the rear end, wherein the inner contour and the complimentary outer contour (10a, 10b, 11) form a connection to one another and a position of the inserted drive component (7) in the receptacle (2) is secured in the direction of the tread surface (4) and the underwater surface (3) and laterally. The invention also comprises at least one attachment means (12a, 12b, 13a, 13b) for the drive component (7) in the receptacle (2), which means can be opened and closed and are provided on the rear end of the drive component (7) and the arms (8a, 8b), and which means prevent the drive component (7) from slipping out of the receptacle (2) from the rear.
