Abstract (en)
The aim of the present invention is to manufacture a particularly light but highly mechanical resistance gullet for riding saddle which is capable of allowing the highest performance in complete safety. Such goal is achieved thanks to a special assembly of the saddle by means of elastomer or velcro components with high tensile strength so that the gullet remains flexible enough to adapt to the measurements of the withers of different horses together with a special and innovative arched mechanisms based on two gear wheels or on a calibrated spine.
