Abstract (en)

[origin: EP3786332A1] Disclosed are a drum type washing machine and a control method and control apparatus thereof, and a storage medium. The method includes: determining that the drum type washing machine enters a washing stage, and controlling, based on a first control parameter, the drum type washing machine for washing, the first control parameter being configured to control formation of a water film having a set thickness between an inner wall surface of an inner drum of the drum type washing machine and laundry, thereby reducing the wear on the laundry. The water film may separate the laundry in the inner drum from an inner wall of the inner drum, and the laundry is supported through a pressure of the water film, thereby avoiding direct rubbing between the laundry and the inner wall of the inner drum to reduce the wear on the laundry.
