Abstract (en)
[origin: EP3786370A2] A vibrating apparatus (1) for excavation and/or demolition, comprising a frame (2) which can be associated with the movable arm of an excavator which is actuated along an advancement direction (A), a vibrating assembly (3) which is supported by the frame (2) so that it can move with an alternating translational motion along a work direction (L), and at least one work tool (4) which is associated with the vibrating assembly (3); at least two of the work tools (4) are associated with the vibrating assembly (3) and are distributed along a transverse direction (T) which is transverse to the work direction (L), the transverse direction (T) and the work direction (L) being adapted to be arranged, during use, transversely to the advancement direction (A).
