Abstract (en)

[origin: EP3786389A1] The invention relates to a device (1) for protecting against friction, for professional ropes (6) for professional vertical works, which comprises a supporting platform (2) that is fixed on a roof (3), the supporting platform (2) comprising an upper longitudinal protective piece (4) and a lower longitudinal protective piece (5), which are parallel to each other and have a round-cornered L-shaped cross section, the tops of both pieces (4, 5) being covered with a protective material (14) designed to act as a support for the ropes (6), wherein the supporting platform (2) is formed by a rigid rectangular board, the front side of which incorporates the lower longitudinal protective piece (5), which completely covers said front side. The supporting platform (2) incorporates a central support (7) that is formed by a vertical partition (71) attached at both sides to respective arched brackets that are designed to: (a) establish a grip (8) for the user; and (b) adjust the slope of the vertical partition (71) that forms a raised surface parallel to the front side of the supporting platform (2) and on which the upper longitudinal protective piece (4) is incorporated.
