Abstract (en)

Directional valve (12) for a hydraulic arrangement (1) of a work vehicle for controlling the operation of a double acting cylinder (2) comprising a piston chamber (6a) and a rod chamber (6b), such directional valve (12) comprising a first port (12a) fluidly connectable to an output of a load sensing hydraulic supply system (10), a second port (12b) fluidly connectable to a reservoir (11), a third port (12c) fluidly connectable to said hydraulic supply system (10) to carry a load sensing signal configured to control the operation of this latter, a fourth and fifth ports (12d, 12e) fluidly connectable to respectively piston and rod chambers (6a, 6b), such valve (12) being configured to allow the generation of an appropriate load sensing signal in both a lowering and lifting operational condition of the cylinder (2).
