Abstract (en)

Method (100, 100') for defining illumination parameters (1c, 2c, 2c2, 3c), comprising the steps; providing (110) an illumination space (14); defining a first point (14a) of the illumination space (14), the first point (14a) assigned to a first illumination parameter (1c); defining a second point (14b) of the illumination space (14), the second point (14b) assigned to a second illumination parameter; storing (130) the first and second illumination parameter; and outputting (140a, 140b) control commands to an illumination device so as to induce the illumination device to reproduce a first light effect according to the first illumination parameter (1c) and a second light effect according to the second illumination parameter.
