Abstract (en)

[origin: WO2019211776A1] The invention relates to a jewellery ring (1) designed to be able to fit on fingers of different sizes, comprising: a ring body (10) having a substantially annular opening (16) for receiving the finger, the ring body (10) comprising at least one housing (12) communicating with the opening (16); at least one adjustment plate (21) which is movably mounted in the housing (12) and extends over an angular segment along the ring body (10); and a spring device (20) designed to exert an elastic force on the adjustment plate (21) in such a way that said plate can be moved along an axis (11) which is substantially radial in relation to the ring body (10), the ring (1) being configurable between a first configuration in which an inner diameter of the opening (16) of the ring (1) is maximal and substantially equal to the diameter of the inner face (17) of the ring body (10) and at least one second configuration in which the inner diameter of the opening (16) is reduced and at least partially defined by the adjustment plate (21) projecting from the inner face (17) of the ring body (10); the spring device (20) being detachably mounted on the adjustment plate (21) by crimping means (24).
