Abstract (en)
[origin: WO2019211450A1] The present invention relates to a finger orthosis for applying a force to a structural part by means of a finger. Finger orthoses of this kind can be used in particular as work aids or assembly aids. The invention also relates further to a method for producing such finger orthoses. The finger orthosis according to the invention has a support element for supporting the finger orthosis on at least one further finger. In a further variant, the finger orthosis has a tool, connected to the frame, for transmitting the force to a structural part.
