Abstract (en)
[origin: WO2019211297A1] The invention relates to a sander housing comprising at least one housing shell element (12) and at least one further housing shell element (14) connected to the housing shell element (12), portions of which shell elements together form a handle (16). According to the invention, the housing shell element (12) and the further housing shell element (14) are interconnected, in particular fixed together, in particular over at least substantially the entire length of the contact line and/or the entire extent of the contact surface of the housing shell element (12) and the further housing shell element (14), at least substantially without using visible fastening elements.
