Abstract (en)

[origin: US2019338831A1] A tensioning device includes a housing, a drive member, a driven member, and a cable member. The housing includes an attachment feature. The drive member is rotatably coupled with the housing. The driven member is disposed in the housing and is operably coupled with the drive member. The cable member is coupled with the driven member. The driven member is slidably coupled with the housing such that the driven member and the cable member are slidable together between a retracted position and an extended position in response to rotation of the drive member.
