Abstract (en)

[origin: WO2019210988A1] The present inventive concept relates to a coupling arrangement for selectively engaging and disengaging a first and a second shaft extending coaxially along an axis A. The coupling arrangement comprises: a first coupling member, and a second coupling member comprising a sleeve shaped, wherein the first coupling member is configured to be rotatably housed within the sleeve shaped element; a selecting element; and at least one locking element; wherein the coupling arrangement is configured to assume an engaged configuration, and a disengaged configuration.
