Abstract (en)

[origin: WO2019211508A1] The disclosure relates to a method for starting a four-stroke reciprocating internal combustion piston engine. The present disclosure further concerns a four-stroke reciprocating internal combustion piston engine for implementing the method. The description is based on the idea of providing an airflow into the combustion cylinder during an instroke of the respective piston, so as to expel any remaining liquid from the combustion cylinder via the exhaust valve.
