Abstract (en)
[origin: WO2020001926A1] The invention relates to a high-voltage feedthrough (1) for an electrical device that can be filled with fluid, wherein the high-voltage feedthrough (1) has a current conductor (2) and the current conductor (2) is surrounded by an insulating body (3), wherein the insulating body (3) is a constituent part of an insulating assembly, and wherein the current conductor (2) has at least one interruption (4), in which a switch unit (5) for interrupting a current path is arranged. The high-voltage feedthrough (1) according to the invention has the advantage that the switch unit (5) is implemented in the high-voltage feedthrough (1) for the electrical device.
