Abstract (en)

[origin: CN112442863A] Provided is a washing container for a washing machine. The washing container has three chambers extending substantially side by side along a longitudinal extension of the washing container, in which a first chamber of the chambers and a second chamber of the chambers are separated from each other by a first partition wall, wherein a first valve is arranged at an end of the first chamber, a second valve is arranged at an end of the second chamber, and a third valve is arranged at an end of the third chamber, and wherein the second chamber and the third chamber are separated from each other by a second partition wall, and wherein a second valve is arranged at an end of the second chamber. The valves are each designed to interact with a respective connection on the washing machine, and wherein a removable reservoir is arranged in the first chamber and the first valve is fastened to the reservoir. Further, a washing machine having such a washing container is disclosed.
