Abstract (en)

[origin: WO2019215272A1] In order to simplify the production of a security element (300) having a first security feature (310) and a second security feature (320), the following method is proposed: (a) providing a light-sensitive film (200) having at least one carrier ply (210) and a light-sensitive functional layer (220) bearing against the latter in a planar fashion; (b) exposing the light-sensitive film (200) at least regionally to form a pattern in the light-sensitive functional layer (220), wherein the security element (300) is formed with a first security feature (310); (b') optionally fixing the exposed light-sensitive film; and (c) printing the carrier ply (210) and, if appropriate, the protective ply (230), wherein a second security feature (320) is produced.
