Abstract (en)
[origin: WO2019215409A1] The present invention relates to an kayak-type inflatable vessel (1), comprising a hull (2) including: a longitudinal bottom (4) comprising a central longitudinal edge and two lateral longitudinal edges so as to have a V-shaped cross-section, the bottom (4) comprising at least one inflatable shell, and an upper rigidifying structure (6) comprising two longitudinal lateral inflatable shells (16) and at least one transverse element (18) mounted between the two lateral inflatable shells (16), each lateral inflatable shell (16) being mounted on one of the lateral longitudinal edges of the longitudinal bottom (4), wherein the two lateral inflatable shells (16) each comprise two walls placed one on top of the other, said walls each including a textile layer and being connected to one another by a multitude of connecting threads distributed over the entire surface of said layers, forming a structure suitable for being inflated to a pressure capable of rigidifying said structure.
