Abstract (en)

[origin: WO2019215768A1] The infill material (10) for synthetic turfs (1) comprises a stabilizing infill (11) constituted of a predetermined quantity per unit surface area of vegetable material of rachis of cereal ear not coated with a film, or layer, of coating material. The above mentioned predetermined quantity per unit surface area is set between 2 kg/m² and 15 kg/m². The infill material (10) provides, furthermore, a performance infill (12) positioned above the stabilizing infill (11) and constituted of polymeric material with elastomeric properties in granular form in a predetermined quantity per unit surface area.
