Abstract (en)

[origin: WO2020015799A1] The invention relates to a method for determining a fluid delivery parameter of a fluid delivery device, in particular for determining a volume flow, comprising the steps of: – determining items of excitation information for a mechanical excitation of at least one fluid delivery element of the fluid delivery device in at least one spatial direction by means of at least one first sensor device, – providing items of operating information comprising at least a value of an operating variable of the fluid delivery device by means of a provision device, – analyzing the provided and determined items of information, – determining the fluid delivery parameter, in particular the volume flow, of the fluid delivery device on the basis of the analyzed items of information.
