Abstract (en)

[origin: WO2019214849A1] The invention relates to a condensate extraction device (38) for a heat exchanger (13), comprising a condensate drain opening (48) and a lock device (40) having a condensate collection chamber (46), wherein the lock device (40) can be arranged in a collection position and in a drain position. The condensate extraction device (38) can be attached to a heat exchanger (13) such that the condensate collection chamber (46) is open to an interior (2a) of the heat exchanger (13) and closed to the condensate drain opening (48) in the collection position and such that the condensate collection chamber (46) is closed to the interior (2a) of the heat exchanger (13) and open to the condensate drain opening (48) in the drain position. The invention further relates to a heat exchanger (13).
