Abstract (en)

[origin: WO2019216822A1] The present invention provides users with a system and method for generating navigation routes for a plurality of vehicles. It is determined that the plurality of vehicles is able to traverse to their respective destinations in a manner without collisions and without unnecessary delay when generating the navigation routes. It is also determined that the plurality of vehicles is able to traverse to the respective destinations in a cost-efficient manner.
