Abstract (en)
   [origin: US2019341055A1] Examples are disclosed that relate to voice identification enrollment. One example provides a method of voice
   identification enrollment comprising, during a meeting in which two or more human speakers speak at different times, determining whether one or
   more conditions of a protocol for sampling meeting audio used to establish human speaker voiceprints are satisfied, and in response to determining
   that the one or more conditions are satisfied, selecting a sample of meeting audio according to the protocol, the sample representing an utterance
   made by one of the human speakers. The method further comprises establishing, based at least on the sample, a voiceprint of the human speaker.
