Abstract (en)
[origin: EP3792443A1] A security closure for a structure is provided. The security closure comprising: a protective barrier comprising a plurality of openings, movable between a retracted position where the structure is exposed and a protected position where the protective barrier extends over at least a portion of the structure; and an illuminated display between the protective barrier and the structure visible through the openings. The illuminated display is arranged to move with the protective barrier between the retracted position and the protected position.
