Abstract (en)
[origin: WO2019220037A1] A ventilation device (10) comprising a flexible support (20) having first and second edges (22,23) delimiting a longitudinal opening (28) and being provided with first and second closing devices (30,32) arranged to cooperate with each other, the ventilation device comprising at least one elastic spacer member (40) that comprises a first tab (42) extending along the first edge and a second tab (44) extending along the second edge, the elastic spacer member being constrained when the closing devices are in the closed position, such that the first and second tabs tend to move away from each other, the length (L) of at least the first tab being less than half the length (L) of the first edge.
