Abstract (en)

[origin: WO2019219966A1] The present invention relates to a packaging machine that unwinds a lower film web from a supply roll and conveys it intermittently or continuously along the packaging machine, forming in a forming station packaging recesses in the lower film web, which are then filled with a product to be packaged, then an upper film web is sealed to the lower film web in a sealing station, the lower and the upper film webs being both unwound from respective supply rollers and both the lower film web and the upper film web being tensioned by respective dancer rollers. The present invention also relates to a method for producing a packaging.
