Abstract (en)

[origin: WO2019219954A1] The invention relates to a car door handle device, the handle of which can be moved between a retracted position and a deployed position by the control of an actuator (11). The actuator (11) comprises an electric motor and a housing containing said motor. The device comprises electrical components (13-16) connected to a connector (17) mounted on a housing of the actuator (11). The connection between the motor and the electrical components (13-16) on the one hand and the connector (17) on the other hand is established by means of cables (131, 132, 141, 142, 151, 152, 161, 62) that pass through the housing of the actuator (11).
