Abstract (en)  
[origin: WO2019220411A1] A heating radiator element (1) comprises a body (2) extending substantially along a longitudinal axis (A) and at least a tern of adjacent fins (11), arranged side by side and having at least respective longitudinal main sections (21) substantially parallel to the axis (A) and substantially vertical in use, for example substantially straight; the ratio (R) between the axial length (LI) of the longitudinal section (21) of a first fin (11.1) of the tern and the sum of the axial lengths (L2, L3) of the longitudinal sections (21) of a second and third fins (11.2, 11.3) of the tern, arranged on opposite sides of the first fin (11.1), being lower than or equal to 0.40.
