Abstract (en)

[origin: WO2019219583A2] The invention relates to a fire protection robot (1, 2) for carrying out a fire protection action. According to the invention, the fire protection robot comprises a communication unit (11) for receiving an instruction signal which represents a target location, and a control unit (10) which is designed to navigate the fire protection robot (1, 2) on the basis of the instruction signal, preferably automatically, along a navigation path to the target location, wherein the control unit (10) is further designed to detect at least one door (3) along the navigation path and to open the at least one door (3) automatically in response to the detection.
