Abstract (en)

[origin: WO2020002030A1] The invention relates to a method comprising the steps: providing a machine-readable description of the application to be installed; enhancing the machine-readable description with further requirements and/or properties; associating the application to be installed with an object identifier which includes the enhanced description and the requirements and/or properties of the application to be installed; associating objects existing in the distributed network environment with at least one further object identifier each which describes at least one property of an object; storing the object identifiers of the application to be installed and of the objects in the distributed network environment in a database; receiving a query regarding the application to be installed; providing the stored object identifiers of the application to be installed and of the objects for an evaluation unit; and receiving a determined appropriate installation location from the evaluation unit. Applications can be installed on a host automatically and in an optimal manner.
