Abstract (en)

[origin: WO2020185616A1] Methods and systems are described for providing media content for continuous watching. A rewind command is received while a first episode of a series is generated for display. In response, and without detecting a further command to skip a portion of an episode, the first episode of the series is rewound. Then, in response to rewinding the first episode to the beginning, title credits of the first episode and end credits of a previous episode of the series are automatically skipped; and the previous episode of the series is automatically rewound.
