Abstract (en)

[origin: WO2019221476A1] The present invention relates to an article and a device for generating aerosol and, more specifically, to an article for generating aerosol, comprising a medium part and a filter part, wherein the filter part includes a cooling filter filled with a particulate coolant having an average longitudinal length of 1.0 mm to 6.0 mm. The article for generating aerosol not only has excellent filtration and cooling effects, but can also simplify the manufacturing process, thereby improving productivity and economic efficiency.
